

Claims

1. (Currently Amended) A liquid crystal display device comprising:
a back light assembly that generates a first light to transform the first light into a second light having modulated optical characteristics;

a receiving container having sidewalls and a bottom face, the bottom face including ~~a combination groove~~ a plurality of sockets depressed below the bottom face ~~that fixes~~ for fixing the liquid crystal display device to an external member, ~~a the sockets each having different diameters including a smaller diameter width of a portion of the combination groove being larger than a width of an entrance portion of the combination groove; and~~

a bottom pan having tabs for embracing the sidewalls of the receiving container and a plurality of projecting plugs each having a substantially curved shape portion receivable into the sockets. ~~and a liquid crystal display panel that transforms the second light into an image light, the liquid crystal display being received by the receiving container.~~

2. (Currently Amended) The liquid crystal display device of claim 1, wherein the groove sockets each have has a diameter corresponding to a width of the curved shape portion of the projecting plugs.

3. (Currently Amended) The liquid crystal display device of claim 1, wherein the sockets are formed at ~~a corner~~ corners of the bottom face of the receiving container.

4. (Canceled)

5. (Canceled)

6. (Currently Amended) The display apparatus of claim 5 ~~2~~, wherein the ~~combination groove has a first spherical shape and the protrusion has projecting sockets each have has a second spherical curved shape being substantially the same as corresponding to the second spherical curved shape portion of the projecting plugs.~~

7. (Canceled)

8. (Canceled)
